

A Handcrafted Log Home to Last for Generations

GreatLand Log Homes is commissioned to build the ultimate family getaway in a majestic mountain setting.

A Colorado building site 9,300 feet in elevation can present a few challenges. Besides the sloping hillside property, the 150 pound per square foot snow load at the building site in Mt. Crested Butte was another item to be contended with. After acquiring the land, the homeowners determined a handcrafted log home was the perfect choice not only for aesthetics, but also for structural integrity and longevity. Once the final decision was made to build with logs the owners selected GreatLand Log Homes to design, engineer and fabricate their dream log home.

The final design was customized specifically for the owner's location and preferences. Large diameter Douglas Fir logs were utilized to provide an exceptional log structure and a high level of energy efficiency through thermal mass. Gabled roofs were designed for the main roof lines as well as the dormers, utilizing steep roof pitches with large overhangs to shed snow efficiently. Vaulted ceilings were created with a network of log posts and purlins which provide an amazing feel of open space throughout

the home and allow for a multitude of windows in the southern gables to capture the breathtaking views. A log post and beam system was used for the attached garage and breezeway to tie the structures together. The overall layout spans over 5,400 square feet, including the optional basement level, and features 5 bedrooms, 3-1/2 baths, a sun room and an oversized 2-car garage. Friends and family appreciate gathering here and are charmed by the modern-rustic log home as well as the world class skiing and summer mountain bike trails.

GreatLand Log Homes is known nationwide as a premium custom log home builder that specializes in handcrafted, full-scribed log home and dry-in packages. The team at GreatLand Log Homes has spent the last 30 years fine-tuning their craft and enjoys working hand-in-hand with each customer to tailor their log home specifically for their needs and the exclusive features of their property. Their love of logs and heavy timber and a passion for architectural design and engineering make GreatLand a distinct design-build company that takes each project from concept through the completion of the log package.

Breathtaking views of Mt. Crested Butte and the valley below surround this majestic handcrafted log home.

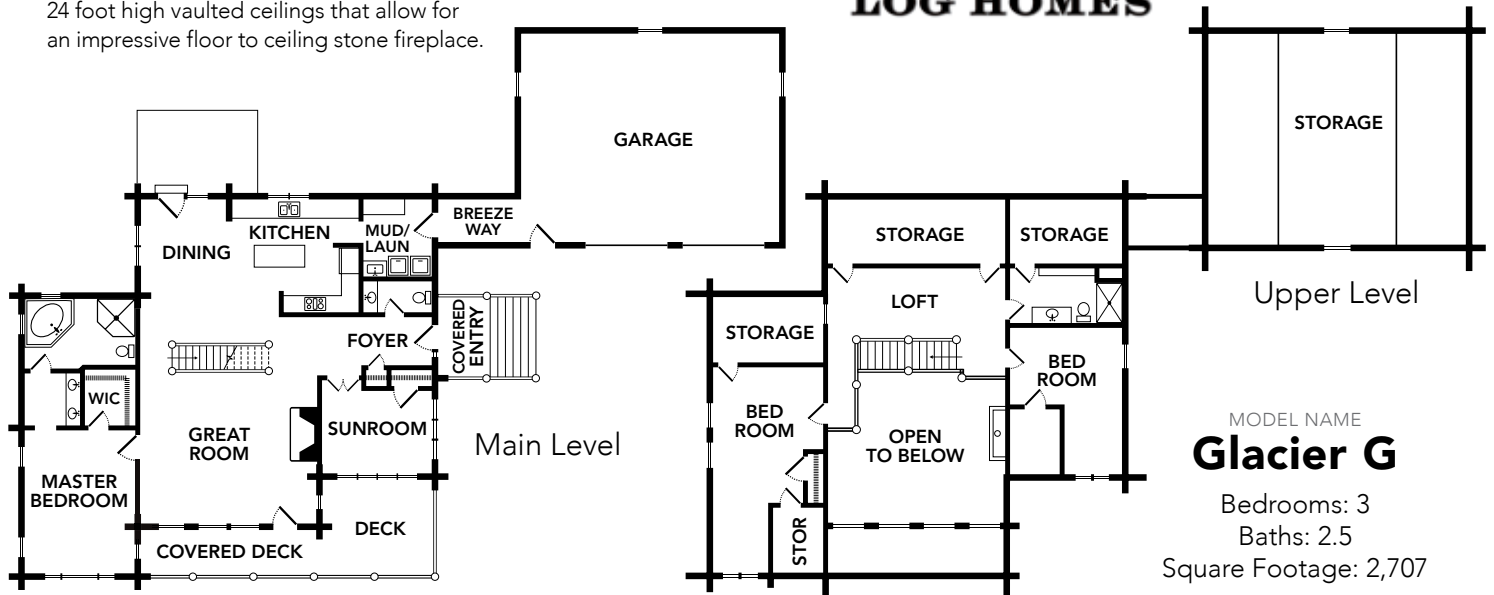

TOP: Steep roof pitches and large overhangs define the mountain style architecture of this handcrafted log home.

ABOVE: Massive windows are utilized to capture the panoramic mountain views as well as to provide heat from passive solar gain during the winter months.

ABOVE, RIGHT: The Great Room features 24 foot high vaulted ceilings that allow for an impressive floor to ceiling stone fireplace.
